LINGESH B

Computer Science and Engineering Student

SUMMARY

Computer Science and Engineering student with hands-on experience in Java, React.js, SQL, and Blockchain development. Passionate about building secure, scalable applications and expanding expertise in the MERN stack.

EDUCATION

B.E.Computer Science & Engineering

Dr.N.G.P.itech

2024 - 2028
CGPA : 8.20

HSC

Literacy Mission Matric Hr Sec School

2024
Percentage : 90.1 %

TECHNICAL SKILLS

Languages

Java • Python • JavaScript

Frontend

HTML • CSS • React

Backend

Node.js • Express.js (Learning)

Database

SQL • MongoDB

Blockchain

Solidity • Ethers.js (Learning)

Tools

Git • GitHub • VS Code

PROJECTS

Blockchain-Based Fertilizer Subsidy Tracking System

Tech : React • Solidity • Ethers.js • Ethereum • MetaMask

- Developed a blockchain-based system to track fertilizer subsidy distribution from farmer registration to dealer-based claiming.
- Built a transparent platform to manage farmer subsidy records and monitor fertilizer claims, reducing duplicate and incorrect claims.

Decentralized Certificate Verification System

Tech : React • Solidity • IPFS • Ethers.js • Ethereum • MetaMask

- Built a decentralized certificate issuance and verification platform using blockchain for secure and tamper-proof credential validation.
- Stored certificate files on IPFS and verified them using Solidity smart contracts.

Smart Helmet for Rider Safety System

Tech :Arduino Uno • Accelerometer • GPS • GSM • Potentiometer

- Designed a smart helmet system using Arduino Uno to detect accidents and monitor rider speed in real time.
- Integrated GPS and GSM for emergency alerts and rider warnings.

Blockchain-Based FPO Ledger & Profit-Sharing System

Tech : React • Solidity • Ethers.js • Ethereum • MetaMask

- Developed a blockchain-based FPO ledger to maintain transparent and traceable records of farmer produce, sales, and transactions.
- Implemented Solidity smart contracts to calculate and distribute farmer profit shares based on predefined rules.

JARVIS – AI Personal Assistant

Tech: Python • AI • Automation • Speech Recognition

- Developed a voice-based AI assistant that converses with users, answers questions, and responds through voice.
- Integrated natural-language commands with laptop task automation, allowing users to control system functions through voice.

CERTIFICATES AND ACHIEVEMENTS

- NPTEL Certifications – Cloud Computing & Introduction to IoT
- Prompt Engineering – VisaiThalam Solutions
- 200+ LeetCode Problems – Java
- Student Development Council – Organized KANAM'26 and college technical events
- Data Science Workshop – IIT Bombay
